6. Application examples.....F11.13.08

7. Additional information.....F11.13.08

1. General information

Designed for the growing international trend for natural ventilation in curtain walling.

The heavy duty friction hinges n° P691-... have a large application field.

Friction hinges n° P694-... are ideal for domestic use.

- Easy to fit, fully concealed once fitted.
- Adjustable friction mechanism.
- Effective weather sealing and draught-proofing.
- Smooth and balanced operation for life, windows open and close with ease.
- Suitable for PVC, aluminium and timber windows.
- Long and reliable life tested to operate for 30,000 cycles.
- Manufactured from high grade Austenitic (AISI 304) stainless steel for maximum lifetime, even in the most corrosive environment.
- The hinges are manufactured conform to all international window performance standards.
- The hinges are always ordered per pair.

2. Friction hinge n° P691-...

Heavy duty friction hinge for enhanced performance for most applications.

- Carries vents from 300 mm to 2500 mm high, up to 180 kg in weight.
- Self-balancing hinge eliminates the need for additional support arms. We recommend to use an additional window stay for vents of more than 100 kg.
- Austenitic (AISI 304) stainless steel end cap for added strength.
- Composite steel/plastic slider for strength, durability and smooth operation.
- Easy to use, adjustable opening stop on all top hung versions.
- Available in different lengths: from 262 to 682.5 mm top hung (n° P691-255, 305, 406V, 559(V), 660) and from 262 to 415 mm side hung (n° P691S-255, 406); see table next page.
- Types n° P691S-255, 406 side hung, open to around 85° and 60° for easy cleaning of windows.
- Types n° P691-406V, 559 top hung, are reinforced with an indentation in the third link.
- Types n° P691-559V, 660 top hung, are supplied with a special third link to provide a higher strength.
- Type n° P691-660 top hung, is available with adjustable fitting block n° S7280 (type 'R'). In this case the character 'R' is added to the order code.
- Example: A pair of reinforced friction hinges for top hung windows with vent height 1000 mm and vent weight 55 kg. Order code: P691-406V

FRICION HINGES

4. Friction hinge n° P694-...

Standard purpose friction hinge for enhanced performance and minimum cost installations.

- Extremely cost effective friction hinge for small and light windows.
- The friction hinges are standard supplied in ferritic (AISI 430) stainless steel for low exposure areas. On request they can also be delivered in austenitic (AISI 304) stainless steel for maximum anti-corrosion durability, essential for exposed coastal locations and many industrialised inland areas.
- Carries top hung vents from 0.3 m to 1.2 m high or side hung vents from 0.6 m to 0.7 m wide.
- Allows side hung vents to open up to 60° for easy cleaning inside the building.

TOP HUNG (max. vent width = 1200 mm)						
Order code per pair	Hinge length L (mm)	Max vent height (mm)	Min vent height (mm)	Max vent weight (kg)	Opening angle A (+/-2,5°)	Dimension 'L1' (mm)

FRICITION HINGES

6. Application examples

Reinforced friction hinge type P691-559V
with packer under the vent arm.

Standard friction hinge type P691-...
with packer under the vent arm.

Friction hinge type P694-...
with packer under the vent arm.

Note: when fitting the friction hinge on the groove, we recommend to support the hinge with packers.

7. Additional information

- Recommended maximum dimensions should not be exceeded without prior approval from Sobinco.
- Vent heights and widths are overall vent sizes (not overall frame sizes). For maximum vent weights and widths, consult profile manufacturers for recommendations on requirements of system strength and sealing.
- Installation:
 - Hinges must be fitted between two parallel faces in accordance with the type of friction hinge (see installation dimensions).
 - All fixing positions of the hinges must be used.
 - The hinges are fixed with standard M5 cylinder head screws into minimum 6 mm screw-thread depth.
 - The upper part of the hinges should be fitted preferably at 2 mm from the top inside corner of the frame.
